<https://www.linkedin.com/in/naveen-dudhyal-927a84351/>

ISTQB-certified Foundation level, Automation Test Engineer with 3 years of experience designing scalable POM frameworks using Playwright (TypeScript), Cypress (JavaScript), and Selenium (Java). Adept at UI/API automation, continuous testing via CI/CD (Jenkins, GitHub), and Agile methodologies. Achieved 95% test coverage and authored 150+ robust scripts within 60% of allocated timelines by leveraging AI-driven testing utilities. Proven ability to accelerate test cycles, reduce defects, and ensure high-quality software releases.

SKILLS

- | | | |
|----------------------|------------------|---------------------------|
| • TypeScript | • Javascript | • Java |
| • Cypress | • Playwright | • Hybrid Framework |
| • Automation Testing | • Manual Testing | • API Testing |
| • Page Object Model | • Jenkins | • Github |
| • Postman | • JIRA | • Allure Reporting |
| • Zoho | • Maven | • Modular Framework (API) |

WORK EXPERIENCE

Software Test Engineer - August Infotech

Jun 2023 - Present

Roles and Responsibilities: -

- Agile & Test Planning: Scheduled test plans, analyzed user stories, and actively participated in Agile ceremonies, including daily Scrum, weekly syncs, client discussions, and retrospective meetings.
- STLC & Defect Management: Strictly adhered to the Software Testing Life Cycle (STLC) and Bug Life Cycle. Reported, tracked, and managed defects using JIRA and Zoho.
- Manual & Functional Testing: Executed comprehensive manual, functional, non-functional, GUI, retesting, and regression testing to ensure high-quality software delivery.
- Test Case Management: Authored, executed, and participated in peer-review meetings for both manual test cases and automated test scripts.
- UI Automation Development: Designed and maintained robust automated test scripts utilizing Cypress, Playwright, and Selenium with TypeScript, JavaScript, and Java.
- Frameworks & Architecture: Developed scalable automation suites leveraging Page Object Model (POM) and Hybrid Frameworks across VS Code, Antigravity IDE, and Eclipse IDE.
- Element Location: Efficiently identified stable web elements for automation using built-in utilities and extensions like SelectorsHub and Playwright Locator Inspector.
- AI-Driven Testing: Leveraged AI-assistive tools (GitHub Copilot, ChatGPT, Gemini, Claude AI, CodiumAI, Perplexity) to optimize test script creation, accelerate debugging, and improve code quality.
- API Testing: Conducted robust API testing using Postman and developed automated API test suites using a Modular Framework.
- CI/CD & Reporting: Managed source code using GitHub, handled project dependencies via Maven, integrated tests into Jenkins pipelines for continuous testing, and generated execution reports using Allure Reporting.
- Responsive & Accessibility Testing: Validated cross-browser compatibility and mobile responsiveness using BrowserStack and Mobile Simulator. Assessed web accessibility utilizing Accessibility Insights.
- Performance Testing: Monitored and analyzed web performance using Performance Insights, GTmetrix, and Google PageSpeed Insights.

EDUCATION

2022 B.Tech / B.E. | Mechanical Engineering

Solapur

PROJECTS (SAMPLE)

Selenium (Java) - Hybrid Framework = <https://github.com/NKDudhyal/MyShop>

This is Hybrid framework uses OOP and POM for modularity. Driven by TestNG runners and reusable Utils, it uses Listeners, Log4j, and ExtentReports to deliver dynamic, custom test reporting.

API_Automation_Modular_Framework = https://github.com/naveendudhyalqa/API_Modular_Framework

With Playwright TS added user service layer, Integrated HTML reporting, Implemented schema validation, Added Jenkins pipeline, Integrated token management, Enhanced environment configuration.

CypressProject-SwagLab-Demo = https://github.com/NKDudhyal/SwagLab-Demo_CyProject

About Automates the "Add to Cart" and "Checkout" process for an E-commerce site using Cypress and JavaScript. Utilizes Mocha for test structuring, Page Object Model (POM) for maintainability, Mochawesome for dynamic reports, and Cypress plugins for enhanced functionality.

ACHIEVEMENTS

- Architected and implemented scalable automation frameworks from scratch using Playwright, Cypress, and Selenium, utilizing the Page Object Model (POM) with TypeScript and Java to enhance code reusability.
- Authored and maintained 150+ robust automated test scripts across three primary testing tools, integrating them with GitHub and Jenkins to establish continuous testing in the CI/CD pipeline.
- Accelerated test development and boosted overall testing efficiency by leveraging AI-assisted coding utilities (such as GitHub Copilot and Gemini) alongside advanced browser extensions (like SelectorsHub).
- Achieved and maintained 95% test coverage across functional, API, and regression testing phases, drastically reducing production defects and ensuring high-quality software releases.
- Delivered the complete automation project using only 50%-60% of the scheduled timeline, ensuring proper implementation and seamless script execution.

AI TOOLS, SOFTWARE'S, EXTENSION'S

- Github Copilot AI, Testim AI, Gemini, Claude AI, Preplexity AI, CodiumAI/Codo AI, ChatGPT, Eclipse IDE, VS Code IDE, Antigravity IDE, DBeaver, SelectorsHub, Playwright Locator Inspector, Cypress Chrome Recorder, Accessibility Insights for Web, Authenticator, Mobile Simulator, WhatFont
